(Can you climb stairs, walk, or perform household tasks without symptoms)

.....

B. Do you require any assistive devices or help with daily activities? YES , NO

If yes, specify

.....

Documentation Tips

- Ensure all data is recorded in a systematic manner (SOAP notes: Subjective, Objective, Assessment, Plan).
- Use open-ended questions initially to allow the patient to elaborate, and then follow up with specific, focused questions.
- Observe non-verbal cues such as facial expressions, breathing pattern, and posture.
- This pattern ensures comprehensive history taking, which is essential for accurate diagnosis and effective care planning in a cardiology ward.

Errors and omissions excepted
